

MEETING MINUTES

Date:	<i>Online Meeting with Wind Europe (WE) – 30 June 2026, 11:15</i>
Location:	<i>Teams Videoconference</i>
Name(s) and function(s) of the Commission representative(s):	<i>DG ENER representative: Pierre Schellekens, Director Energy policy: Strategy and Coordination</i>
Name(s) of the interest representative(s):	<i>Participants from Wind Europe: Pierre Tardieu, Marija Dabrisiute, Vasiliki Klonari</i>
Subject matter:	<i>Insert a brief description of the topic(s) discussed, e.g. Exchange of views on Electrification Action Plan; Electricity taxation; Accelerating renewable deployment (Grids Package); Support for electrification including the Industrial Decarbonisation Bank, ETS Investment Booster and other relevant financing instruments.</i>
Main points raised and positions expressed:	<i>Wind Europe:</i> - <i>presented their view on the 15th of July Package, arguing that everything needs to be mutually reinforcing (EAP, ETS, grids charges)</i> - <i>presented their view on the need to leverage the ETS reform as an opportunity to channel those revenues towards industrial electrification.</i> - <i>presented how they see the largest gains being electrification of low temperature industrial process heat (< 500 degC)</i> - <i>Presented their suggestion to prioritise this sector for financing, tax interventions, network access, ease of signing PPAs. Innovation Fund is a possible vehicle for this, but needs to be lighter procedurally, and redeployed towards industrial electrification.</i> - <i>Presented their interest in knowing what specific measures will be proposed to make electricity-to-gas price ratio better, and how those industry customers can be targeted</i> - <i>Tech neutrality focus can actually increase system costs</i>

	<i>while prioritising domestic RES and already commercial technologies can reduce such costs.</i> - <i>Also very interested in flexibility needs assessments</i> • <i>DG ENER:</i> - <i>presented the overall direction of the Package along with the synergies between the different pieces (ETS, EAP, network charges/taxation proposal).</i> - <i>briefly outlined the ongoing work on the EAP, the main barriers including electricity-gas price ratio, the focus on end-use sectors but also on supply and flexibility to drive down prices, and on those technologies that are ready to electrify, while also looking at innovation.</i> - <i>Implementation of current legislation as well as Grids Package negotiations were also briefly touched upon, with WE very active on those fronts.</i> - <i>On flexibility needs, clarified that we keep up to date on literature findings including WindEurope's studies. Also advised them to also talk to ACER for the FNAA and share their studies.</i>
Conclusions:	<i>N/A</i>
