

MEETING MINUTES

Date:	<i>30 June 2026</i>
Location:	<i>Luxembourg, Videoconference</i>
Name(s) and function(s) of the Commission representative(s):	<i>Ana Rita Lopes Ramos, Head of Unit, ENER D3 “Radiation Protection and Nuclear Safety” and representatives of ENER D3 and D4 “ITER”</i>
Name(s) of the interest representative(s):	<i>KFT Kernfusionstechnologie Konzepte GmbH</i>
Subject matter:	<i>Exchange of views on the potential contribution of fusion technologies to the future production of medical radioisotopes in the EU</i>
Main points raised and positions expressed:	<i>KFT Konzepte presented its activities, as a private initiative, on the fusion-based Volumetric Neutron Source (VNS) technology, building on expertise developed within EUROfusion. VNS is considered by KFT Konzepte as a testing facility for different fusion applications (tritium breeding) and materials.</i> <i>The company outlined a Radioisotope Generation System (RIGs) concept for integrating radioisotope production into a VNS facility. Preliminary studies at the Technical University of Munich indicate a significant production potential for different medical radioisotopes.</i> <i>The discussion covered the technical maturity of the concept, possible applications and timelines, regulatory aspects and the potential role of such technologies within the broader European radioisotope ecosystem.</i> <i>The exchange also highlighted KFT Konzepte’s proposal to leverage a future VNS fusion research infrastructure for medical radioisotope production, creating potential synergies with the European radioisotope production ecosystem.</i>
Conclusions:	<i>The Commission took note of the concept presented and, given the early stage of development, encouraged KFT Konzepte to continue engagement with the relevant research services, as well as with the radioisotope production community.</i>
